### What is Machine Learning?

**Learning** is any process by which a system **improves performance** from

**experience** (Herbert Simon)

Definition by Tom Mitchell (1998):

Machine Learning is the study of algorithm that

- improve their performance P
- at task *T*
- with experience *E*

A well-defined learning task is given by <**P**, **T**, **E**>

### **Example: Defining the Learning Task**

### Improve on task T, with respect to performance metric P, based on experience E

T: Recognizing voices

P: Percentage of word sounds correctly detected and classified

E: Database of human-labeled sounds of words

T: Detecting crack damage on images

P: Percentage of damage correctly identified and localized

E: Database of human-labeled images of crack damage

T: Driving on four-lane highways using vision sensors

P: Average distance traveled before a human-judged error

E: A sequence of images and steering commands recorded while observing a human driver.

T: Classification of vehicle crossing and types using acceleration

P: Percentage of vehicle crossing, and types correctly estimated

E: Database of acceleration measurements collected under various vehicle crossing

### Why is Machine Learning Different from Traditional Programming?

# **Traditional Programming**

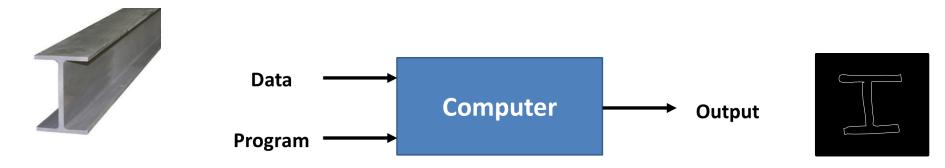

# **Machine Learning**

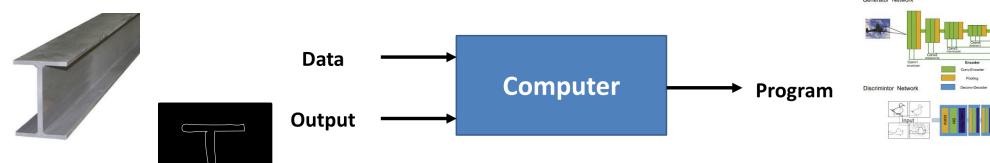

### **Example: Edge Detection**

# **Traditional Programming**

Edge detection, Hough transform

# **Machine Learning**

### Why is Everyone So Interested in Machine Learning Now?

## **Bigger Data**

Flood of digital information that doubles every three years

# Better Hardware

Optimized chips improving faster than Moore's law

Cheap storage and bandwidth

# Smarter Algorithms

Ability to handle realworld complexity

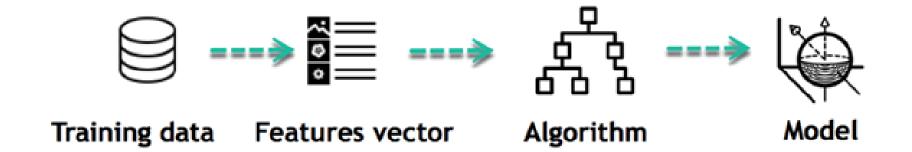

Training time down ~80% since 2010

### **Sample Applications**

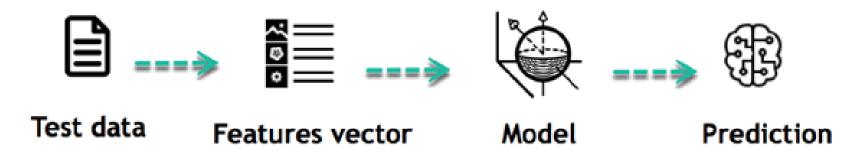

- Web search
- Computational biology
- Finance
- E-commerce
- Robotics
- Information extraction
- Social network
- Debugging Software
- Inspection

What are your applications?

### **How Does Machine Learning Work?**

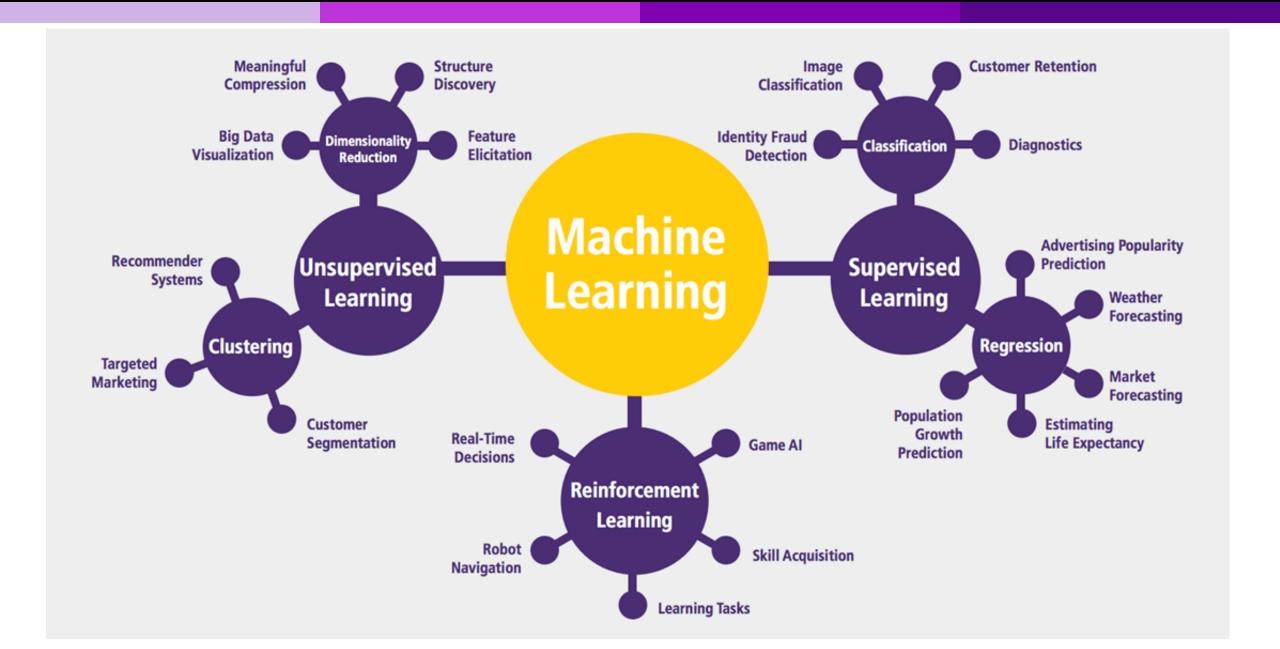

### **Learning (Training) Phase**

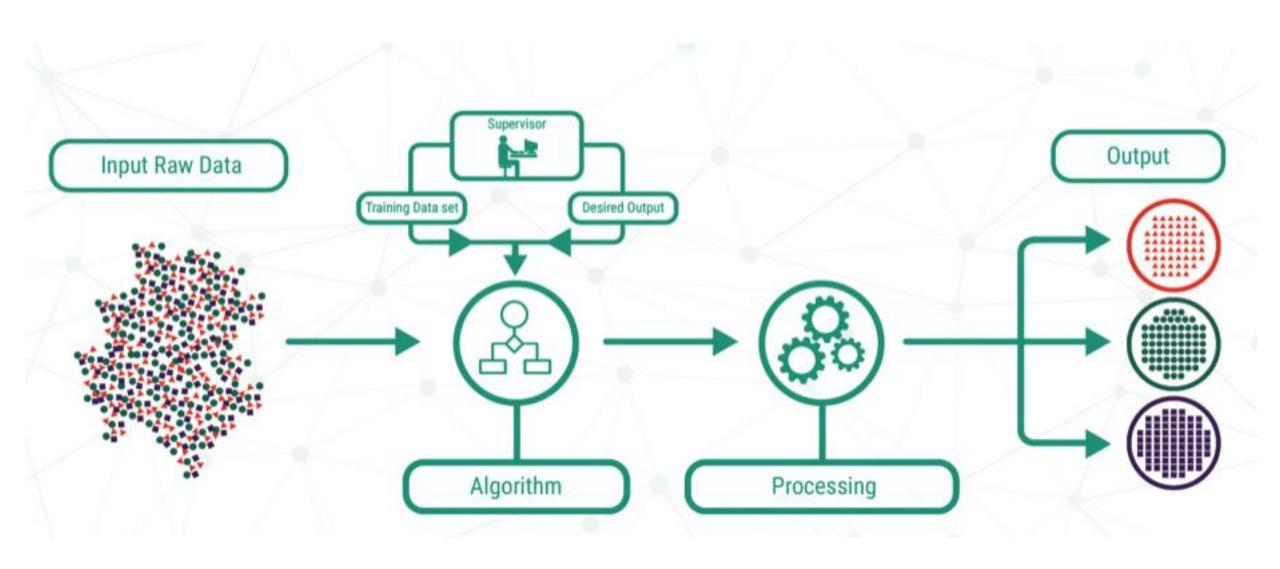

**Inference (Testing) Phase** 

### **Machine Learning Applications**

### **Supervised Learning**

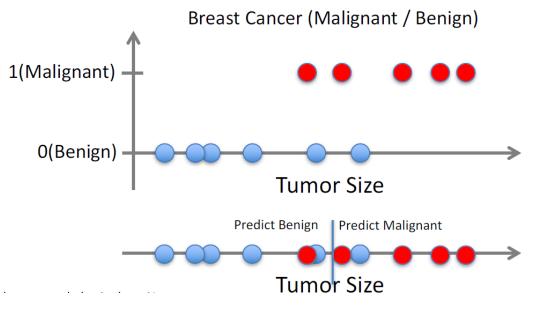

### **Supervised Learning: Regression and Classification**

Given  $(x_1, y_1), (x_2, y_2), ..., (x_n, y_n),$ lean a function f(x) to predict y given x, where y is real-valued data

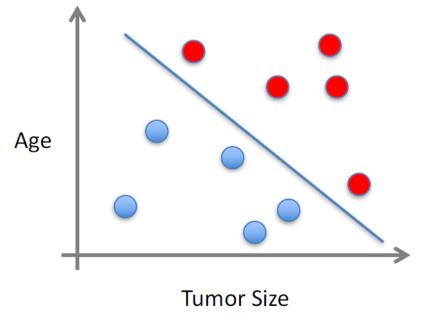

Year

Given  $(x_1, y_1), (x_2, y_2), ..., (x_n, y_n),$ lean a function f(x) to predict y given x, where y is categorical data

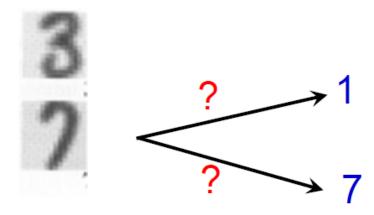

### **Supervised Learning: Classification (Multi Dimension)**

- x can be multi-dimensional
  - Each dimension corresponds to an attribute

- Clump Thickness
- Uniformity of Cell Size
- Uniformity of Cell Shape

...

### **Example: Supervised Learning (Civil and Mechanical Engineering)**

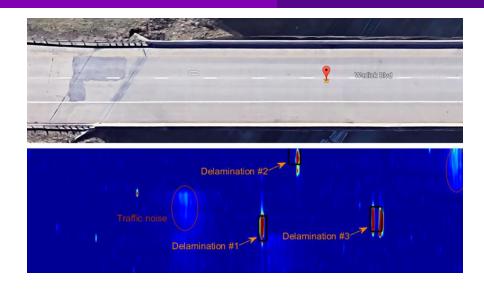

**Collapse classification** 

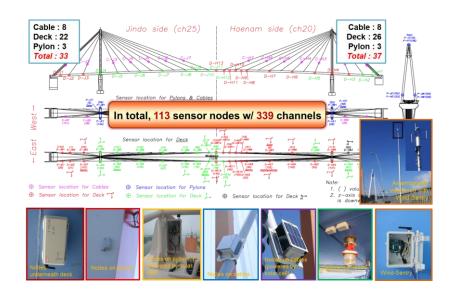

2017-01-24 13:17:13 0:00:54 example (195 m 1.55 m 0.00 n

**Pipeline inspection** 

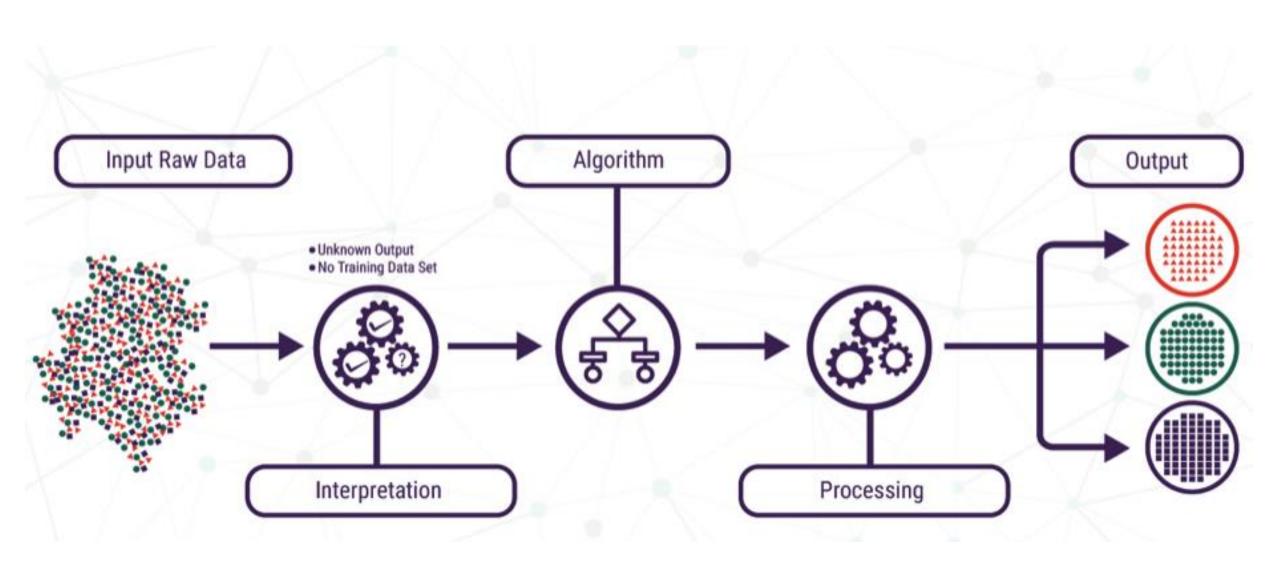

**Delamination detection** 

Wirless health monitoring

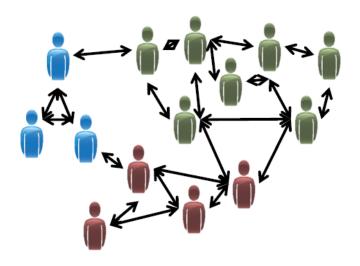

### **Unsupervised Learning**

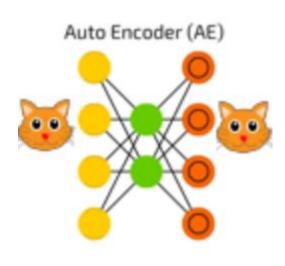

Class 1Class 2Unknown

### **Example: Unsupervised Learning**

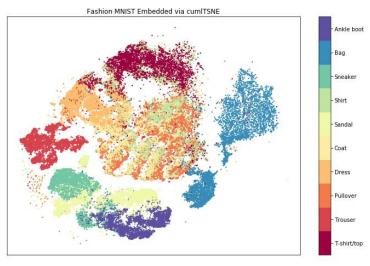

**Social Network** 

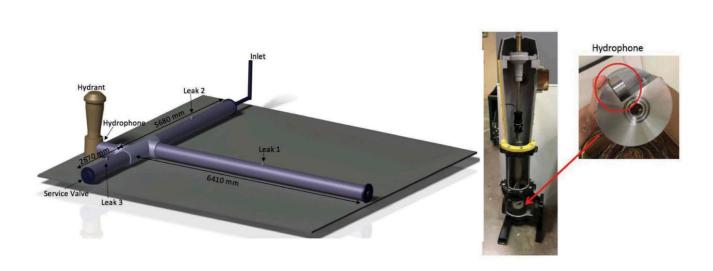

**Autoencoder** 

CPU times: user 2.02 s, sys: 896 ms, total: 2.91 s Wall time: 2.9 s

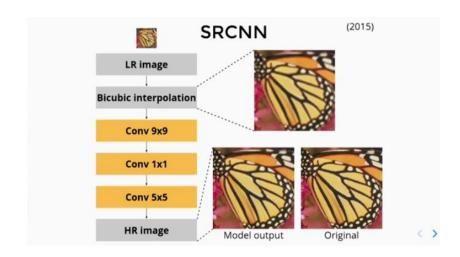

Visualization (t-SNE)

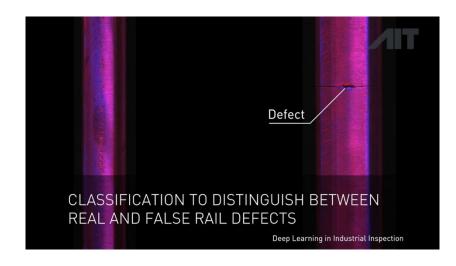

### **Example: Unsupervised Learning (Civil and Mechanical Engineering)**

Leak detection (Cody et al, 2018) - Dr. Narasimhan's lab

**Super-resolution application** 

**AIT Deep Learning in industrial inspection**
